

Osteo Superior Formula GOLD

Premium bone health solution**

Dietary Supplement

Osteo Superior Formula – a powerful nutrient formula to enhance healthy bone mineralization**

The human skeleton consists of 206 to 212 bones, the exact number varies from person to person – which remains the same are the immensely important functions our skeleton has. Our bones support the soft body parts, protect the internal organs and play a decisive role in the movement as a starting point for the muscles. Like a strong fortress, for example, the skull bone is located around the brain, while the chest forms a protective shield around the heart and lungs. Even if it does not appear this way at first glance, the bone is a living, dynamic tissue that is constantly being remodeled to provide stability as well as elasticity. Bones consist mainly of connective tissue, which provides flexibility. It contains important micronutrients, mainly calcium and phosphorus, which give the bone its strength and hardness.

Osteo Superior Formula GOLD – what is it?

Osteo Superior Formula GOLD supplies calcium and phosphorus from natural microcrystalline hydroxyapatite. The vitamin D₃ contained here is an indispensable cofactor, as it plays an important role in the absorption and utilization of calcium and phosphorus. Vitamin K₂, which is present in this complex as the brand raw material MenaQ7® in a clinically validated and patented form, supports the preservation of stable bones. Biogena Osteo Superior Formula GOLD is complemented by silicon-containing silica from bamboo extract and the trace element boron, thus offering a comprehensive supplement to your daily diet.**

Osteo Superior Formula GOLD

- Adequate calcium and vitamin D throughout the life, as part of a well-balanced diet, may reduce the risk of osteoporosis.
- Phosphorus is needed to maintain normal bones and teeth**
- Calcium is needed to maintain normal bones and teeth**
- Vitamin D contributes to the absorption and utilization of calcium and phosphorus and to a normal calcium level in the blood. It thus contributes to the preservation of normal bones and teeth**
- Vitamin K helps maintain normal bones**
